# Atlanta

The Atlanta Office in Georgia, USA, is just outside one of, if not the, busiest commercial aircraft hubs in the world, the Hartsfield-Jackson Atlanta International Airport. It controls the second-busiest spaceport on Earth (second only to Penn Station).

# Atlantis

No spaceport; underwater. Access is by any submersion-capable craft. No maglev train station. It does help support an underwater theme park for visiting water-breathing offworlders.

Buenos Aires

# Chicago

The Chicago Office is likely the third busiest Office and spaceport (at the Chicago Station, outside the city) on Earth, behind Headquarters/Penn Station, and the Atlanta Office. Chicago houses a considerable population of offworlders, many of whom like the climate of the famed Windy City.

Dallas

# Delhi

# Dubai

# Gaborone

The Gaborone Office in Botswana controls the major spaceport on the African continent of Earth.

# Geneva

Principally a research facility. Lots of new tech and retrofitted offworld tech comes from the Geneva Office.

# Headquarters

Located on Division Avenue in Brooklyn, New York.

# Hong Kong

London

# Los Angeles

The Los Angeles Office (spaceport: Area 51) is famed for its entertainment industry. Since many of the planets of the galaxy did not develop a film industry as such, movie exports are one of Earth's big moneymakers, and would-be actors from all over the galaxy flock to Earth's Los Angeles Office to 'be discovered.' The front organization, *New Worlds Talent Agency*, is the legal agent representing these offworld talents, and is a direct subsidiary to the LA Office's organization.

McMurdo

# MOSCOW

# Naacali

Naacali is the only full Office in the underwater continent of Mu. It has no spaceport; it is underwater. Access is by any submersion-capable craft. No maglev train station.

Quito

Sydney

Tokyo

Toronto
