

# Reptoid

Classic reptiles of UFO lore, from Draigon aka Emdali in Division Five; capital Slliith City; think Star Trek Gorn. They share Emdali with the other sentient species, Draconans. Same genus as Draconans, but different species, shorter and squatter, dark scales, more lizard-like, no wings; 6' tall, greenish-brown scales and a flat, lizard-like face with vertical-slit pupils and baleful, bulging yellow eyes, Long torso, short thick stubby legs, long arms hanging halfway down the thighs, and the hands were possessed of only four clawed fingers—one of which was an opposable thumb.
